Week Report 8

What is VIM?

Vim is a free and open-source, screen-based text editor program. It's an improved clone of BIll Joy's vi.

What is nano?

GNU nano is a easy-to-use command line text editor for Unix and Linux operating systems.

Describe in your own words how to:

- Start and quit vim
  - `vim + file` to start vim, `qa!` to quit everything forcibly
- What are the different vim modes:
  - **Insert Mode:** Inserts text
  - **Normal Mode:** Manipulates the text
  - **Command Mode:** Enters vim commands
  - **Visual Mode:** Navigation and manipulation of text selections
  - **Select Mode:** Visual mode similarity
  - **Ex-mode:** Enters vim commands and optimized for batch processing
- Insert text in vim
  - To insert text in vim you have to use the `vim` command and press i to enter insert mode
